BECAUSE IT FORMED

Inside the first aid kit include basic items that allow you to treat common problems, such as bleeding cut, burns, bruises, sprains, or twists. It can be useful for other minor injuries that may happen in daily life.

The contents are different depending on the place where it will be used.

The most important thing about a first aid kit is that it is always complete, organized, and ready to use at any time.

CLEANING AND DISINFECTION MATERIALS

- Disposable glove:
They help prevent infections by avoiding the transmission of germs and bacteria through open wounds or bodily fluids.

CLEANING AND DISINFECTION MATERIALS

- 70% alcohol or antiseptic solution:
It is used to disinfect the skin and prevent infections.

- Hydrogen peroxide:
It is used to disinfect minor wounds.

CLEANING AND DESINFECTION

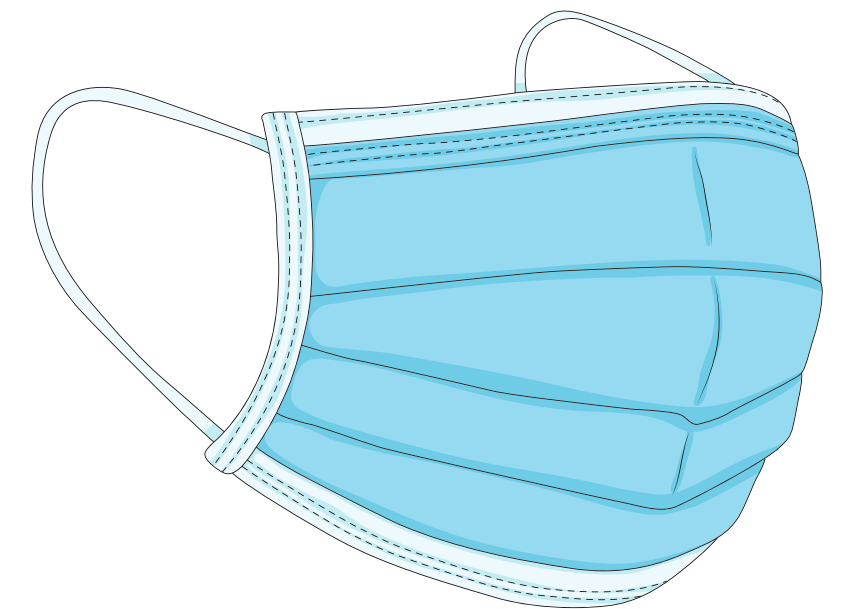

MATERIALS

- Antiseptic wipes:
They help prevent infections in minor injuries such as cut, scrapes, or burns.

- Mild soa:
Its function is to clean wounds before dressing they. Since its pH is neutral, it is suitable for all skin type.

- Face mask:
It is used to reduce the risk of virus transmission.

MATERIALS FOR COVERING WOUND

- *Gauze and bandages:*
They are used to cover and protect wounds, stop bleeding, and immobilize injuries

- **Adhesive tape:**
It is used to fix bandages and dressing, protecting the wound.

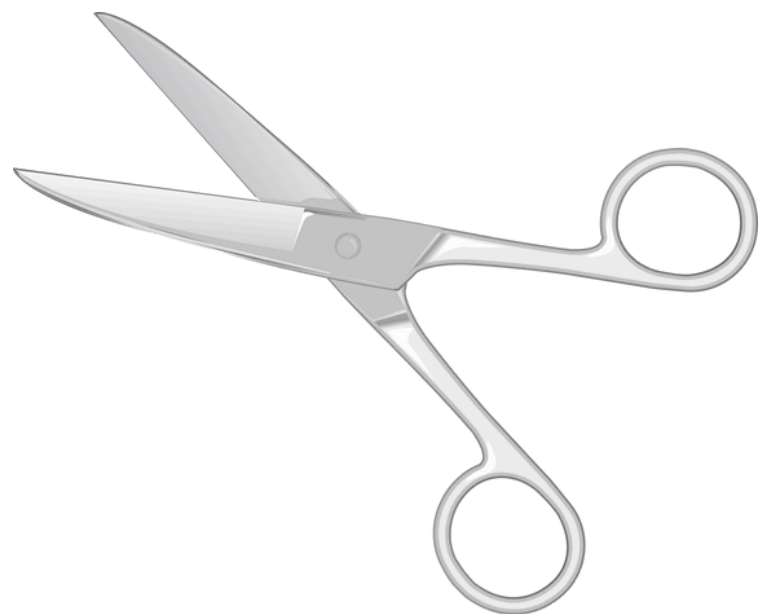

- **Antiseptic dressing:**
They are used to protect the wound and prevent infection, promoting healing
